

Battsys Rated Grade B in CDP 2024 Climate Change Report

Guangzhou Battsys Co., Ltd, as one of the 9,600 global enterprises invited to disclose data through the Carbon Disclosure Project (CDP) questionnaire since 2020, has now consecutively participated in annual CDP reporting for four years (2020–2024), disclosing comprehensive greenhouse gas (GHG) and water security emissions across Scope 1, Scope 2, and Scope 3.

The 2024 CDP assessment expanded beyond traditional carbon management to evaluate 12 key dimensions, including: business strategy, risk disclosure and governance, environmental policy, opportunity disclosure and value chain engagement.

2024 Rating Results: Battsys achieved a Grade B in the Small & Medium Enterprises (SMEs) category, the highest attainable level for SMEs. This rating exceeds the global average of C, the regional average of C and the industry average of C.

Since initiating its GHG emissions inventory in 2020, Battsys has established science-based decarbonization targets and a sustainability roadmap. In 2021, the company’s 10-year emission reduction commitments were validated by the Science Based Targets initiative (SBTi), positioning it among over 800 global enterprises approved by SBTi. Anchored in the ISO 14001 Environmental Management System, Fengjiang leverages platforms like CDP and SBTi to measure sustainability performance and drive continuous improvement.

Battsys remains committed to integrating environmental management into daily operations, innovating green practices, and advancing corporate social responsibility. We pledge to contribute actively to global GHG reduction efforts.
